ABSTRACT OF THE DISCLOSURE

In a call setup process for setting up a call for a mobile station of the network, respective uplink and downlink channels are allocated between the mobile station and a first one of a plurality of base transceiver stations of the network. The mobile station and at least one further base transceiver station of the plurality, neighbouring the said first base transceiver station, are provided with call setup information for use by the mobile station and the or each further base transceiver station to allocate respective uplink and downlink channels between the further base transceiver station concerned and the mobile station.
